

Администрирование локальных сетей

Лабораторная работа №13

Абдуллахи Бахара

03 мая 2026

Российский университет дружбы народов, Москва, Россия

Цели и задачи работы

Провести подготовительные мероприятия по организации взаимодействия через сеть провайдера посредством статической маршрутизации локальной сети с сетью основного здания, расположенного в 42-м квартале в Москве, и сетью филиала, расположенного в г. Сочи.

Выполнение лабораторной работы

Обновлённая логическая схема проекта

Рис. 1: Обновлённая логическая схема проекта

Рис. 2: Физическая схема связи между площадками

Физическая схема размещения площадок в Москве

Рис. 3: Физическая схема размещения площадок в Москве

Рис. 4: Подсеть основной территории организации 42-го квартала в Москве

На добавленном оборудовании были заданы имена устройств, пароли доступа, включено шифрование паролей, созданы локальные пользователи, указаны доменные имена, сгенерированы RSA-ключи и разрешён доступ по SSH.

Настройка маршрутизатора 42-го квартала

```
Router#conf t
Enter configuration commands, one per line. End with CNTL/Z.
Router(config)#
Router(config)#host msk-q42-babdullakhi-gw-1

The screenshot shows a network configuration window titled "sch-sochi-babdullakhi-sw-1". It has three tabs: "Physical", "Config", and "CLI". The "CLI" tab is active, displaying a series of configuration commands for a switch. The commands include setting the host name, enabling VTY lines, setting passwords, enabling login, enabling secret, enabling service password-encryption, setting the username and privilege level, setting the domain name, and generating RSA keys. The window also shows the output of the commands, including the RSA key size needs to be at least 768 bits for SSH version 2, and the SSH-5-ENABLED status. The window has a "Copy" button and a "Paste" button at the bottom right.

Выводы по проделанной работе

В ходе лабораторной работы схема проекта в Cisco Packet Tracer была дополнена подсетью основной территории организации 42-го квартала в Москве и подсетью филиала в г. Сочи.

Для добавленного оборудования была выполнена первоначальная настройка: заданы имена устройств, настроены пароли доступа, включено шифрование паролей, созданы локальные пользователи, сгенерированы RSA-ключи и разрешён удалённый доступ по SSH.
